

General

The Collinear antenna requires two mounting brackets to hold the antenna in position. The bracket assemblies consist of 1xU-Bolt 3xD-plates with nuts and washers in each set. The brackets are zinc plated mild steel.

BR_COLLINEAR_KIT

Mounting

This simple method of mounting provides a solid support that will support the antenna for many years.

This mounting provides an excellent earth to the main pole. This pole should preferably have a low resistance to ground.

Mounting brackets may be replaced if the antenna is dismantled for maintenance.

The brackets are suitable for pole sizes up to a maximum 2" (50mm) in diameter.
