

General

The Yagi antenna requires a single mounting bracket. The bracket assembly consists of 1xU-Bolt 1xD-plate with nuts and washers. The brackets are zinc plated mild steel.

BR_YAGI_KIT

Mounting

This simple method of mounting provides a solid support that will permanently support the antenna.

This mounting also provides an excellent earth to the main pole. This pole should preferably have a low resistance to ground.

Mounting brackets may be replaced if the antenna is dismantled for maintenance.

The brackets are suitable for pole sizes up to a maximum 2" (50mm) in diameter.
