

General

The DEMO-905 has been designed to demonstrate the 905U telemetry modules in a customer environment. This is a fully working demonstration that simulates radio control of a tank system.

Operation

The DEMO-905 set is a flexible sales tool for on site demonstrations. The two independent modules (tank and pump) provide a real working demonstration that is effective up to 1/2 mile (3/4 km) using the WH900 antennas provided.

The interactive demonstration gains excellent customer acceptance and in many cases an initial site survey may be achieved.

Each set includes battery packs and chargers for portability. Modules may be charged using the 110 VAC wall adapters included. The WH900 demo whip antennas and catalog CD are also included.

DEMO-905

The full kit is provided in a high impact lockable carry case to protect the demonstration modules in transit.

Specification

Type	Demonstration 905U telemetry
Case size	L 20" / 51cm W 16" / 41cm D 8" / 20cm
Frequency	900Mhz spread spectrum
Module type	905U-1 (x 2)
Antennas	WH900 (Included)

Carry case color	Charcoal
Overall weight	16.5 lb. - 7.5kg
Power supply(AC)	12-24VAC
Power supply(DC)	15-30VDC
