EZ Valve

Fisher® EZ Sliding-Stem Control Valve

Fisher EZ valves (figures 1 and 2) are used for throttling or on-off control of a wide variety of liquids and gases. The single-port, globe-style body design offers quick-change trim and a post-guided, unbalanced valve plug. The EZ valve is used in chemical or hydrocarbon processing applications or wherever control of non-lubricating, viscous, or other hard-to-handle fluids is required.

Metal-to-metal seating is standard for all general applications over a wide range of pressure drops and temperatures. Metal-to-PTFE seating is optional for stringent shutoff requirements.

The easy-e™ Valve Family

EZ valve bodies are part of the versatile easy-e family of industrial control valves. easy-e valve bodies share the following characteristics:

- Multiple trim material choices
- Trim temperature capability with standard metal seats to 427°C (800°F)
- FGM gaskets
- Interchangeable, restricted-capacity trims and full-sized trims to match variable process flow demands

Specifications	27

- Different valve plug styles that provide particular flow characteristics for highly-specialized applications. Standard plugs are available with the following flow characteristics:

- quick-opening
- linear
- equal percentage

- Optional constructions allow material compatibility with NACE MR0175 / ISO 15156 and MR0103. Contact your Emerson Process Management sales office for details.

- 316 stainless steel packing box parts are standard (including packing flange, studs, and nuts)

Features

- Trim Designed for Stability**—Post guiding provides valve plug stability with less chance of a sticking valve plug due to non-lubricating or sticky process fluids or build-up of entrained solids. Post guiding stabilizes the valve plug at all points in its travel range to reduce vibration, mechanical noise, and trim wear.
- Performance+ Seat Ring**—Flow-straightening, vaned seat ring is available in full port and first reduction port sizes. It offers excellent open- and closed-loop performance and may be used as a direct replacement for the non-vaned seat ring. The Fisher valve division recommends that the Performance+ seat ring be used for non-viscous, flow-up, liquid applications.
- Compliance with the Clean Air Act**—ENVIRO-SEAL packing systems (figure 4) that provide an improved stem seal to help prevent the loss of process fluid are available. These packing systems feature PTFE, Graphite ULF, or duplex packing with live-loading for reduced packing maintenance.
- Reliability**—The process fluid flows through the trim, flushing away solid deposits above and below the guide bushing, thus reducing the possibility of a sticking valve plug.
- Easy Maintenance**—Quick-change trim, with a clamped-in seat ring, reduces the disassembly time. The valve body can stay in the pipeline during removal of trim parts for inspection or maintenance.
- Application Flexibility**—Low-flow requirements can be satisfied with standard restricted-capacity trim or with Micro-Form, Micro-Flute, or Micro-Flow valve plugs. If flow requirements change, the valve can be converted to full-sized trim.
- Economy**—Streamlined flow passages provide greater capacities than most globe valves of the same line size.

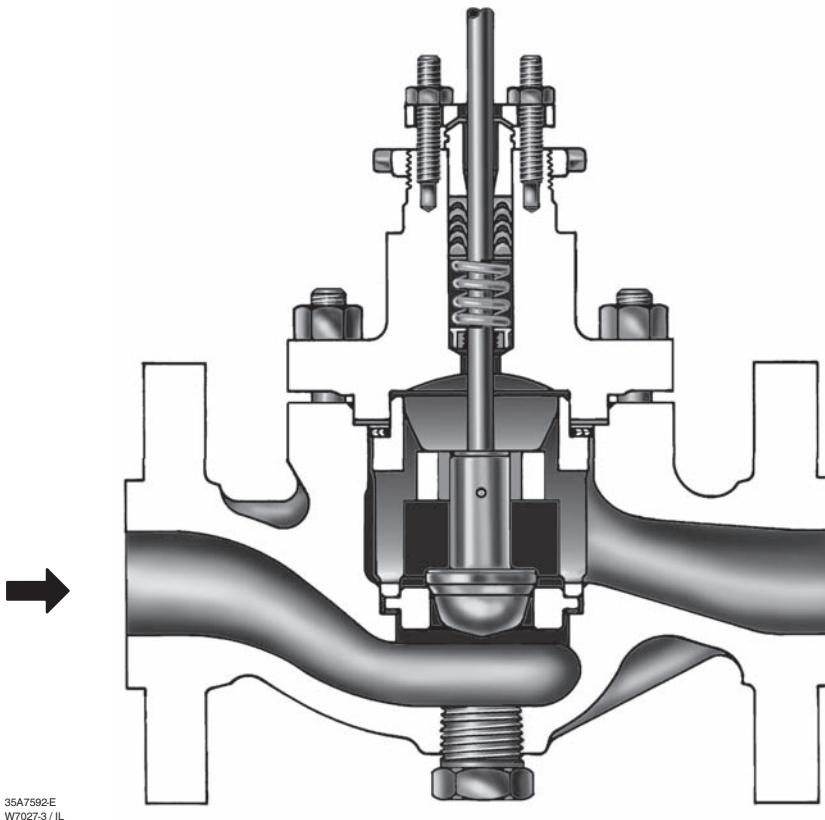

Figure 2. Fisher EZ Sectional with Optional Drain Plug

- **Compliance with European Standards—** Valves are available with dimensions specified by EN/DIN standards. See figure 7.

- **Sour Service Capability—** Unless otherwise noted, references are to NACE MR0175-2002. Optional materials are available to meet NACE MR0103 and NACE MR0175 / ISO 15156. Material requirements under these standards vary by edition and year of issue; the specific standard must be specified.

ENVIRO-SEAL, HIGH-SEAL Packing Systems

ENVIRO-SEAL and HIGH-SEAL packing systems

offer exceptional sealing capabilities. These systems easily install in your existing valves or can be purchased with new valves. These systems offer an improved method of sealing your process to conserve valuable process fluid. The long-life and reliability of these systems also help to reduce your maintenance costs and downtime.

For applications requiring compliance with environmental protection regulations, the unique ENVIRO-SEAL packing system (figure 4) and, for hazardous service, the ENVIRO-SEAL bellows seal system (figure 3) are offered. The emission control packing system helps to keep emission concentrations below the EPA 100 ppm requirement.

EZ Valve

For an excellent stem seal in applications that are not environmentally-sensitive, the HIGH-SEAL Graphite ULF packing system (figure 4) is offered. The HIGH-SEAL packing system provides excellent sealing at pressure/temperature ratings beyond ENVIRO-SEAL limits. ENVIRO-SEAL systems may also be applied for excellent stem sealing in higher pressure/temperature applications not requiring EPA compliance.

ENVIRO-SEAL packing systems, available with PTFE, Graphite ULF, or duplex packing, and the HIGH-SEAL Graphite ULF packing system feature live-loading and unique packing-ring arrangements for long-term, consistent sealing performance.

ENVIRO-SEAL, HIGH-SEAL Features

- **Excellent Sealing Capabilities**—The packing system provides excellent sealing, guiding, and transmission of loading force. The excellent sealing of the ENVIRO-SEAL system can control emissions to below the EPA (Environmental Protection Agency) minimum of 100 ppm (parts per million).

- **Improved Service Life**—ENVIRO-SEAL and HIGH-SEAL system design, very smooth stem surface, and live-loading combine to give you long service with very low maintenance. The external live-loading provides a constant load over the life of the packing material, which greatly reduces your need for packing box adjustment and maintenance.

- **Easy Installation in Existing Valves**—All parts needed to install the systems in existing valves are available in a convenient kit.

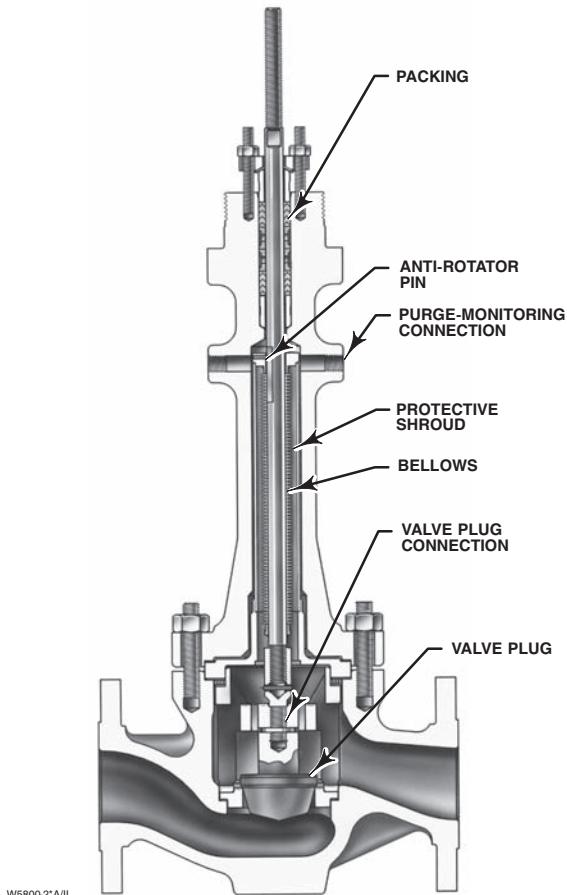

Figure 3. Fisher EZ Valve with ENVIRO-SEAL Bellows Seal Bonnet

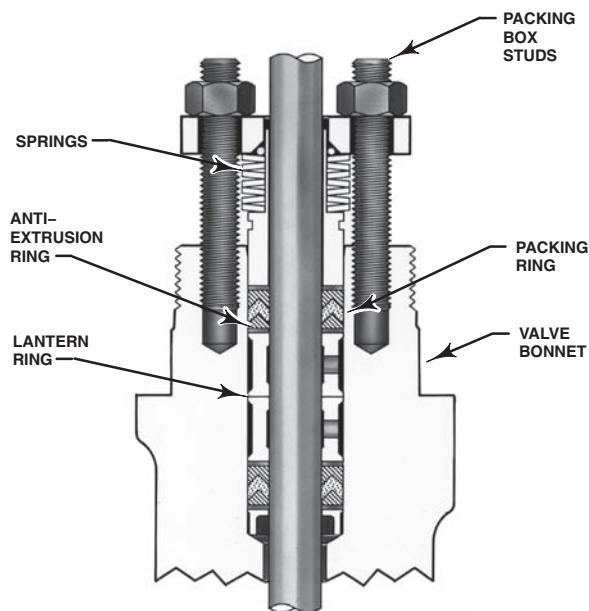

- **Adaptable to Many Applications**—ENVIRO-SEAL systems are available with PTFE or Graphite ULF packing for 9.5 through 31.8 mm (3/8 through 1-1/4 inch) diameter valve stems. HIGH-SEAL systems with Graphite ULF packing are available for 9.5 through 50.8 mm (3/8 through 2-inch) diameter valve stems. **Standard ENVIRO-SEAL packing systems can be used in vacuum service with packing rings in standard orientation. It is not necessary to reverse the ENVIRO-SEAL PTFE packing rings.**

EZ Valve

Micro-Flute Valve Plugs for Minimum Leakage

The EZ valve can be furnished with PTFE composition-seat Micro-Flute valve plugs for Class VI shutoff per ANSI/FCI 70-2 and IEC 60534-4.

These valve plugs are available on NPS 1/2 to 2

valves with a 9.5 mm (3/8 inch) stem diameter, 9.5 mm (3/8 inch) actuator-stem connection, and 6.4 mm (0.25 inch) seat ring port diameter. These plugs have the same flow coefficients as standard Micro-Flute plugs. Standard seat rings are used.

The valve plugs have a screwed retainer that holds the seat disk and valve plug tip to the valve stem.

1. With non-lubricating fluids, temperature is limited to 149°C (300°F).

2. For NPS 2 valve body, maximum temperature is 466°C (870°F).

EZ Valve

Table 8. Bonnet Selection Guidelines

BONNET STYLE	PACKING MATERIAL	IN-BODY PROCESS TEMPERATURE LIMITS ⁽¹⁾	
		°C	°F
Plain: ■ Standard for NPS 1/2, 3/4, 1, and 1-1/2 inch valves with 2-1/8 inch yoke boss diameter ■ Standard for NPS 2, 3, and 4 valves with 2-13/16 inch yoke boss diameter ■ Optional for NPS 2, 3, and 4 valves with 3-9/16 inch yoke boss diameter	PTFE V-ring	-18 to 232	0 to 450
	PTFE/Composition	-18 to 232	0 to 450
	Graphite ribbon/filament	-18 to maximum shown in table 6	0 to maximum shown in table 6
Style 1 Cast Extension: ■ Optional for all valve sizes. Check yoke boss diameter	PTFE V-ring	-46 to 427	-50 to 800
	PTFE/Composition		
	Graphite ribbon/filament	-46 to maximum shown in table 6	-50 to maximum shown in table 6
Style 2 Cast Extension: ■ Optional for all valve sizes. Check yoke boss diameter	PTFE V-ring	-101 to 427	-150 to 800
	PTFE/Composition		
	Graphite ribbon/filament	-101 to maximum shown in table 6	-150 to maximum shown in table 6
ENVIRO-SEAL bellows seal bonnet	PTFE	For exceptional stem sealing capabilities. See Bulletin 59.1:070, ENVIRO-SEAL Bellows Seal Bonnets, for pressure/temperature ratings.	
	Graphite	For exceptional stem sealing capabilities. See Bulletin 59.1:070, ENVIRO-SEAL Bellows Seal Bonnets, for pressure/temperature ratings.	

1. These in-body process temperatures assume an outside, ambient temperature of 21°C (70°F) and no insulation on the bonnet. When using any packing at low process temperatures, a cast extension bonnet may have to be used to prevent packing damage which could result from the formation of valve stem frost. Material selection for trim and other components will also be limiting factors.

1. EZ should not be used in flow down service including on-off applications.

2. Pressure drop cannot exceed maximum inlet pressure as indicated in the specifications on page 24.

3. The trim may be further limited by maximum pressure drops listed in tables 9 and 10.

4. Pressure drops at intermediate temperatures may be interpolated.

5. Maximum temperature capability of PTFE-coated N04400 gaskets as used in gasket set 3 is 149°C (300°F).

1. 6.4 through 19.1 mm (0.25 through 0.75-inch) port diameters use Micro-Form valve plug.

2. Micro-Flow valve plug.

3. Also available in 1-flute and 3-flute Micro-Flute valve plugs.

Table 16. Typical Combinations of Metal Trim Parts for Equal Percentage (Including Micro-Form), Linear, and Quick Opening Valve Plugs for Compatibility with NACE MR0175 / ISO 15156 and MR0103 Specifications, Environmental Restrictions Apply, Refer to Standard

Trim Designation	Valve Plug	Seat Ring Retainer	Bushing	Seat Ring	Valve Stem, Packing Follower, Lantern Ring, Packing Box Ring, Pins, and Disk Retainer
85	S31600 (316 stainless steel)	CF8M (316 stainless steel)	Alloy 6B	S31600	S20910 (Valve Stem) S31600 (All Other Parts)
85C ⁽¹⁾	S31600/PTFE	CF8M	Alloy 6B	S31600	
86	S31600 w/CoCr-A seat	CF8M	Alloy 6B	S31600/CoCr-A	
87	S31600 w/CoCr-A seat & guide	CF8M	Alloy 6B	S31600/CoCr-A	
87C ⁽¹⁾	S31600/PTFE w/CoCr-A guide	CF8M	Alloy 6B	S31600	

1. 85C and 87C are trims for PTFE-seat construction.

Table 17. Bolting Materials and Temperature Limits for Bolting Compliance with NACE MR0175-2002, NACE MR0175/ISO 15156, and NACE MR0103. Environmental restrictions may apply.

VALVE BODY MATERIAL	BOLTING MATERIAL	TEMPERATURE CAPABILITIES			
		°C		°F	
		Min	Max	Min	Max
Non-exposed bolting (Standard)					
WCC and CF8M (316 SST)	Studs	Steel SA-193-B7	-48(1)	427	-55(1)
	Nuts	Steel SA-194-2H			800
Exposed bolting (Optional) Requires Derating of Valve ⁽²⁾ When These Body-to-Bonnet Bolting Materials are Used					
WCC and CF8M	Studs	Steel SA-193-B7M	-48(1)	427	-55(1)
	Nuts	Steel SA-194-2HM			800
1. -29°C (-20°F) with WCC valve body material. 2. Derating is not required for CL300 valves. Derating is required for valves rated at CL600 and above. Contact your Emerson Process Management sales office for assistance in determining the derating of valves when these body-to-bonnet bolting materials are used.

2 B=A/2.

Ordering Information

Inlet pressure and temperature must always be limited by the applicable ASME pressure/temperature rating. Pressure drop information for various trim material combinations is provided in tables 10 and 11. Pressure drop information for gasket materials is listed in tables 12 and 13. The maximum allowable pressure drop for the application must not exceed the lowest value indicated for the combination of materials selected.

Steel and Stainless Steel Valves.

Flanged: ■ CL150, CL300, or CL600 raised-face (RF) or ring-type joint (RTJ) flanges per ASME B16.5

Screwed or Socket Welding: NPS 1/2 through 2, consistent with ASME B16.11

Buttwelding (schedule 40 or 80): NPS 1 through 4, consistent with ASME B16.25

Maximum Inlet Pressure and Temperatures^(1, 2)

As listed below, unless limited by maximum pressure drop or material temperature capabilities

Cast Iron Valves.

Flanged: Consistent with CL125B or CL250B pressure-temperature ratings per ASME B16.1

Steel and Stainless Steel Valves.

Flanged: Consistent with CL150, CL300, and CL600⁽³⁾ per ASME B16.34

Screwed or Welding: Consistent with CL600⁽³⁾ per ASME B16.34

Maximum Pressure Drops⁽²⁾

Same as maximum inlet pressure for specific construction defined above, except where further limited as shown in tables 8, 9, and 11. For soft seats on NACE service, see figure 5.

Shutoff Classification Per ANSI/FCI 70-2 and IEC 60534-4

Metal Seating: Class IV is standard. Class V is optional.

PTFE Composition Seating: Class VI

Construction Materials

Body and Bonnet: ■ Cast iron, ■ WCC steel, ■ CF8M (316 stainless steel), ■ WC9 chrome

moly steel, or ■ other materials upon request

Trim Materials: See tables 3, 4, 5, and 15.

All Other Parts: See tables 6 and 10

Material Temperature Capabilities⁽²⁾

Body-Trim Combinations: See table 7.

Bolting for NACE MR0175 / ISO 15156 and MR0103: See table 17.

All Other Parts: See tables 6 and 10

Flow Characteristics

■ Equal percentage, ■ quick opening, and ■ linear. With soft seat, equal percentage is standard

Flow Direction

Up through the seat ring

Flow Coefficients and Noise Level Predictions

See table 14 and Catalog 12

Port Diameters and Valve Plug Travels

See table 15

Yoke Boss and Stem Diameters

See table 15

Typical Bonnet Styles

■ Plain or ■ extension. See figure 7 for standard dimensions

■ ENVIRO-SEAL bellows seal bonnet. See figure 3. Also, see Bulletin 59.1:070, ENVIRO-SEAL Bellows Seal Bonnets, for more information.

EZ Valve

Specifications (continued)

Packing Arrangements

Standard Material: Single PTFE V-ring

Optional Materials: See table 6.

ENVIRO-SEAL Packing Systems: See figure 4.

ENVIRO-SEAL Packing Systems in vacuum service: Standard ENVIRO-SEAL packing systems can be used in vacuum service with packing rings in standard orientation. Do not reverse the ENVIRO-SEAL PTFE packing rings. Also, see Bulletin 59.1:061, ENVIRO-SEAL Packing Systems for Sliding-Stem Valves, for more information.

Approximate Weights

NPS 1/2, 3/4 valves: 9 kg (20 lb)

NPS 1 valve: 11 kg (25 lb)

NPS 1-1/2 valve: 18 kg (40 lb)

NPS 2 valve: 36 kg (80 lb)

NPS 3 valve: 54 kg (120 lb)

NPS 4 valve: 75 kg (165 lb)

Valve Dimensions

See figure 7. ■ ENVIRO-SEAL bellows seal bonnet dimensions, figure 6

Additional Options

■ Lubricator or ■ lubricator/isolating valve for packing lubrication and ■ valve body drain plug

1. EN (or other) ratings and end connections can usually be supplied; consult your Emerson Process Management sales office.

2. Do not exceed the pressure/temperature limits in this bulletin. Any applicable standard or code limitations should not be exceeded.

3. Certain bonnet bolting material selections may require a CL600 easy-e valve assembly to be derated. Contact your Emerson Process Management sales office for more information.

Product Bulletin

51.1:EZ

March 2010

EZ Valve

ENVIRO-SEAL Packing System Specifications

Applicable Stem Diameters

- 9.5 mm (3/8 inches), ■ 12.7 (1/2), ■ 19.1 (3/4) diameter valve stems

Maximum Pressure/Temperature Limits⁽¹⁾

To Meet the EPA Fugitive Emission Standard of 100 PPM⁽²⁾.

For ENVIRO-SEAL PTFE and ENVIRO-SEAL Duplex packing systems: full CL300 up to 232°C (450°F)

For ENVIRO-SEAL Graphite ULF packing: 104 bar (1500 psig) at 316°C (600°F)

Construction Materials

PTFE Packing Systems.

Packing Ring and Lower Wiper: PTFE V-ring⁽³⁾.

Male and Female Adaptor Rings: Carbon-filled PTFE V-ring

Graphite ULF Packing Systems: Graphite rings

Anti-Extrusion Washer: Filled PTFE (not required for Graphite ULF packing)

Lantern Ring: S31600 (316 stainless steel) (not required for Graphite ULF packing)

Packing Box Flange: S31600

Spring: ■ 17-7PH stainless steel or ■ N07718

Packing Follower: S31600 lined with carbon-filled PTFE

Packing Box Studs: Strain-hardened 316 stainless steel

Packing Box Nuts: 316 stainless steel SA194 Grade 8M

1. Refer to the valve specifications in this bulletin for pressure/temperature limits of valve parts. Do not exceed the pressure/temperature rating of the valve. Do not exceed any applicable code or standard limitation.

2. The Environmental Protection Agency (EPA) has set a limit of 100 parts per million (ppm) for fugitive emissions from a valve in selected VOC (Volatile Organic Compound) services.

3. In vacuum service, it is not necessary to reverse the ENVIRO-SEAL PTFE packing rings.
